Our best ever toothbrush, for complete oral care

Feel confident, with 100% coverage

The DiamondClean Smart is our best toothbrush, for complete care****. High-performance brush heads let patients focus on all areas of their oral health, and our Smart Sensor technology gives personalized feedback and coaching.

Superior results for patients' oral care needs

- Removes 10x more plaque* for a deep clean
- Up to 7x healthier gums* in just 2 weeks
- Remove up to 5x more stains* in just 3 days
- Supports long-lasting clean breath

Personalized feedback with smart sensor technology

- Tracks and improves your patients' coverage
- Alerts patients when they're brushing too hard
- Guides patients to reduce their scrubbing
- A second chance to clean missed spots
- Helps patients start to take better care of trouble areas

Intuitive brushing experience

- Brush heads sync with optimal mode for ultimate results
- Offers 5 modes, 3 intensity settings
- Make sure patients get the most from their brush heads

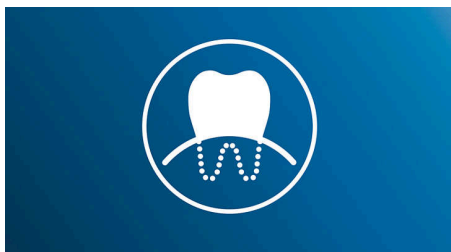

Highlights

Say goodbye to plaque

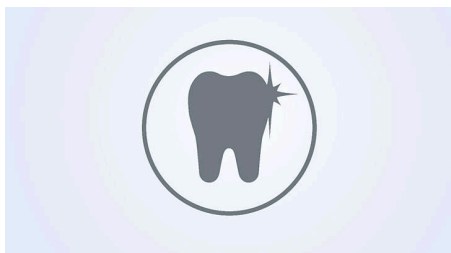

C3 Premium Plaque Control is our deepest cleaning brush head yet. With soft flexible sides, the bristles contour to the shape of each tooth's surface to provide 4x more surface contact and remove up to 10x more plaque from hard-to-reach areas*.

Care for your gums

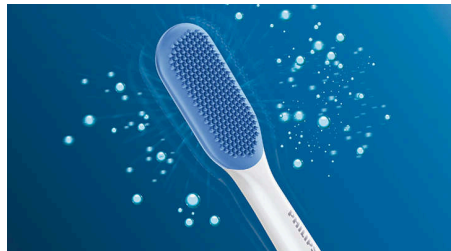

Click on the G3 Premium Gum Care brush head to improve your gum health. Its smaller size and targeted gum line bristles deliver gentle yet effective cleaning along the gum line, where gum disease starts. It's clinically proven to deliver up to 100% less gum inflammation* and up to 7x healthier gums in just two weeks.*

W3 Premium White brush head

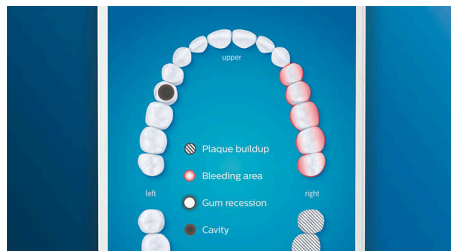

W3 Premium White is our best brush head for removing stains. With its densely packed central stain removal bristles, it's clinically proven to remove up to 5x more stains* in just three days.

TongueCare+ tongue brush

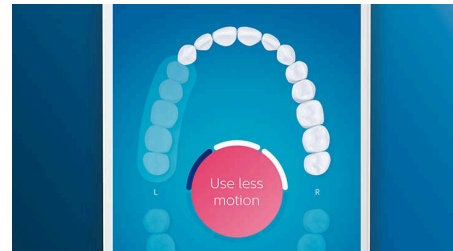

With 240 elastomer MicroBristles, the TongueCare+ tongue brush is specifically designed to clean the soft and porous surface of the tongue. The flexible MicroBristles contour to and gently clean around the ridges and grooves, to remove bacteria buildup and drive our bacteria-killing BreathRx tongue spray deeper. The compact shape allows patients to comfortably clean the entire tongue.

Focus areas and goal-setting

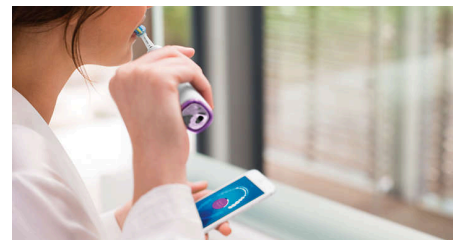

If you identify specific spots in a patient's mouth that need more attention due to plaque buildup, gum recession or any other issue, DiamondClean Smart can help them tackle those trouble areas. Patients can highlight these spots in their personalized 3D mouth-map within the Philips Sonicare app, and they will receive reminders to give these areas the extra care they need each time they brush. The Philips Sonicare app maintains a running history of their brushing data, so patients can easily review their performance, track their progress and work to improve their daily oral care routine.

Location sensor

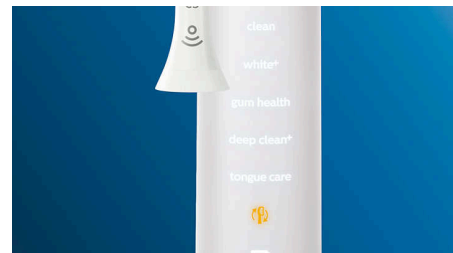

DiamondClean Smart's location sensor shows patients where they're brushing too little for better coverage. If there are spots your patients consistently miss when they're brushing, the location sensor will bring them to their attention.

Scrubbing sensor

With an electric toothbrush, patients should let the brush do the work rather than using a scrubbing motion. DiamondClean Smart has a scrubbing sensor that helps guide them to reduce scrubbing for optimized technique and a gentler clean.

BrushSync mode pairing

Whatever their oral care needs, DiamondClean Smart can help your patients achieve them. A microchip in their brush head tells their DiamondClean Smart which one they're using. So if they click on a gum-care brush head, for example, their toothbrush knows to select the optimal mode and intensity to provide a gentle yet effective care for their gums. All they need to do is to press the power button.

Highlights

Smart replacement reminders

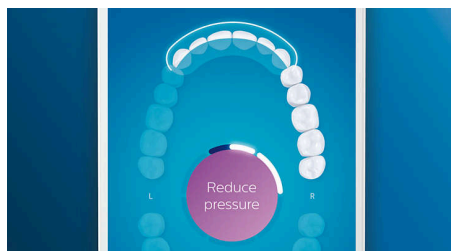

Over months of normal use, brush heads gradually wear down and lose their stiffness. An algorithm combining the data from smart brushing sensors and the microchip in the brush heads gives patients an accurate replacement reminder for each brush head. The Philips Sonicare app includes a smart brush head performance monitor to track brush head effectiveness based on patients' actual brushing time and pressure. It tells them when a brush head needs to be replaced so they continue to get the best results. They even have the option to order replacement brush heads from within the app.

5 modes, 3 intensity settings

With five brushing modes (Clean, White+, Deep Clean+, Gum Health, TongueCare+) and three intensity settings (Low, Medium, High), your patients can personalize their brushing experience for optimal comfort and a complete clean. See Specifications for more detailed information on modes.

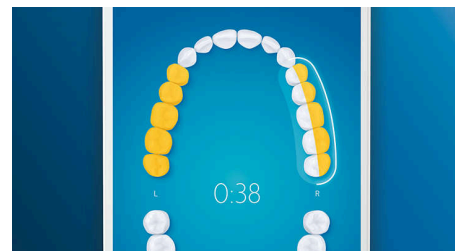

Pressure sensor

Your patients likely won't notice if they're brushing too hard, but their DiamondClean Smart will. If they apply too much pressure, the

intuitive pressure sensor will make the toothbrush handle gently pulsate so they know exactly when to adopt a softer touch. In studies, 7 out of 10 aggressive brushers successfully reduced their brushing pressure thanks to the pressure sensor.

TouchUp feature

If your patients happen to miss any spots during a brushing session, DiamondClean Smart's TouchUp feature gives them the opportunity to go back for a second pass and immediately address missed areas to achieve a more complete clean.
