- Sterilising carrying case for fast, easy hygiene

#### Trusted by medical professionals

- One-piece design made from 100% medical-grade silicone
- Orthodontic teat for healthy oral development
- Distributed by hospitals in the USA.\*\*

# Highlights

**Follows the curves of the face**

The special heart-shaped shield is designed to follow the natural curves of your baby's face to provide maximum comfort without bumping into their tiny nose.

**100% medical-grade silicone**

Durable one-piece design is made entirely from flexible medical-grade silicone. Our team of experts specially created it for newborns from 0-6 months.

**Orthodontic teat**

Soothie supports the natural oral development of your baby. The orthodontic teat with a symmetrical shape respects your baby's palate, teeth and gums.

**Finger-held solution**

Unique design lets you place your finger in the teat. This helps strengthen the bond with your baby by helping them suckle.

**Distributed by hospitals**

Trusted by medical professionals to calm newborns. The Philips Avent Soothie range is distributed in hospitals throughout the USA.

**Hygienic design**

Thanks to the finger-held design, cleaning is easy without drops of water getting trapped in the teat. (Don't worry: a soother clip can still be attached to the small hole in the front).

**Sterilising carrying case**

The carrying case doubles as a steriliser so soothers are always ready when you need them. Add some water and pop it in the microwave for extra hygiene. Made from 90% plant-based materials\*, the case is reusable and works quicker with up to 50% less CO2 emissions than boiling\*\*\*.

# Specifications

**Country of origin**

USA

**Material**

90% plant-based sterilising case\*

**What is included**

Soothie soother: 2 pcs

\* Mass balance approach.

\*\* All of our Soothies have the same teat and one-piece design, and come with a variety of shield shapes, including those distributed in US hospitals.

\*\*\* Compared to traditional sterilisation methods (boiling) for soothers.

\*\*\*\* For hygiene reasons, replace soothers after 4 weeks of use.
